

Trace

Santiago Garcia - 2025-01-30 - Troubleshooting

Trace

Trace is a lightweight extension of our [Homer SIP capture](#), a diagnostic tool used to both record and debug SIP and RTCP Media messages exchanged between endpoints on our network.

While the Trace tool does not contain the detail of the Homer Application, it is a useful application for engineers to identify basic [INVITE](#) request.

How use Trace

1. Select Tools > Trace.
2. Select Preferences

The screenshot shows the Trace tool interface. At the top, there is a search bar labeled "Filter" with the placeholder text "Search for 'from' or 'to' number". To the right of the search bar is a "Show registration" toggle switch. Below the search bar are buttons for "Last calls" with options: "LAST 30 MINS", "LAST HOUR", "LAST 3 HOURS", "LAST 6 HOURS", and "RANGE". A "SEARCH" button is located on the right side of the interface.

DATE	METHOD	FROM	STATUS	SOURCE PORT	DESTINATION IP	DESTINATION PORT

Trace Registration

To both receive and make phone calls the handset will normally be **registered** to our network. This useful Registration test tool verifies the last four hours of **registration** attempts, including any failures. The test also identifies the UserAgent, which is helpful in diagnosing a failure to a particular phone.

Device Provisioning **Trace** Call Check Reception Console Porting Teams Heartbeat SMS

Filter Search for "from" or "to" number Show registration
