Trace

Santiago Garcia - 2026-04-04 - [Troubleshooting](#)

Trace

Trace is a lightweight extension of our [Homer SIP capture](#), a diagnostic tool used to both record and debug SIP and RTP Media messages exchanged between endpoints on our network.

While the Trace tool does not contain the detail of the Homer Application, it is a useful application for engineers to identify basic [INVITE](#) request.

How use Trace

1. Select Tools > Trace.
2. Select Preferences

The screenshot shows the Trace tool interface. At the top, there is a search filter for "from" or "to" number and a "Show registration" toggle. Below the filter are tabs for "LAST 30 MINS", "LAST HOUR", "LAST 3 HOURS", "LAST 6 HOURS", and "RANGE". A "SEARCH" button is located on the right. The main table displays call logs with columns for DATE, METHOD, FROM, SOURCE PORT, DESTINATION IP, and DESTINATION PORT. A modal window is open over the "INVITE" row, showing the full SIP message details.

DATE	METHOD	FROM	SOURCE PORT	DESTINATION IP	DESTINATION PORT
15 Nov 2023 21:20:21	CANCEL	142.43917917@192.168.222.85	222.85	192.168.222.71	5060

Trace Registration

To both receive and make phone calls the handset will normally be **registered** to our network. This useful Registration test tool verifies the last four hours of **registration** attempts, including any failures. The test also identifies the UserAgent, which is helpful in diagnosing a failure to a particular phone.
